Quick setup — if you've done this kind of thing before

https://github.com/mbalsoft/STM32F0DISCOVERY_NRF24L01_RX.git

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

…or create a new repository on the command line

```
echo "# STM32F0DISCOVERY_NRF24L01_RX" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/mbalsoft/STM32F0DISCOVERY_NRF24L01_RX.git
git push -u origin master
```

…or push an existing repository from the command line

```
git remote add origin https://github.com/mbalsoft/STM32F0DISCOVERY_NRF24L01_RX.git
git push -u origin master
```

…or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
